Mohamed Abdelnasser

AI Engineer | LLM Automation & NLP Pipelines | Production AI Systems
Dubai, United Arab Emirates

Summary

Hi, I'm Mohamed Abdelnasser, an AI Engineer based in Dubai, specialising in production AI systems, LLM-driven automation, and NLP pipelines.

I currently work at Printerpix, where I build and deploy AI-powered systems across 9 international markets, from LLM-based analytics pipelines and ML-driven pricing optimisation to multilingual content generation with LangChain and AI-powered quality assurance using Gemini Vision.

Before Printerpix, I optimised RAG pipelines and built ReAct agents during an NLP internship at Corporatica, and developed computer vision and NLU/NLG systems for the RoboCup@Home competition (1st place Egypt, 3rd place Netherlands).

I also hold a B.Sc. in Artificial Intelligence (Intelligent Systems) from the Arab Academy for Science, Technology, and Maritime Transport (GPA: 3.94, Honours)

Experience

Printerpix
AI Engineer
October 2025 - Present (10 months)
Dubai, United Arab Emirates

- Architected AI analytics pipeline using Python, BigQuery, and Gemini LLMs, automating marketing reporting and anomaly detection across 9 international markets, reducing manual analysis by ~80%.
- Developed ML-powered pricing optimisation using scikit-learn and Monte Carlo simulation (10,000+ scenarios) with 95% CI statistical validation via SciPy.

- Designed LangChain multi-chain LLM architecture with Gemini for automated multilingual content generation across 6 languages, with Pydantic validation and multi-platform API integration.
- Deployed AI-powered QA system using Gemini Vision, Playwright, and FastAPI, automating cross-platform validation across 7 regional markets.

Udacity

Session Lead

July 2025 - September 2025 (3 months)

- Led the DECI Summer Cohort (Level 1), delivering 3 weekly live online sessions to 30+ students.
- Covered Python, HTML, CSS, fundamentals of AI, and data science, along with introductions to networks, cybersecurity, multimedia, and encoding/decoding.
- Mentored students through hands-on projects and activities, achieving an 80%+ graduation rate by strengthening problem-solving and practical understanding.

Robotics Club - AASTMT

Vice President of Software Development

October 2022 - June 2025 (2 years 9 months)

El Alameen, Matruh, Egypt

- Organized RoboCup-inspired line-tracking and CPC-inspired programming competitions to provide participants with practice for the actual competitions and to test their skills.
- Conducted sessions teaching Python, C/C++, Competitive Programming, and Arduino to over 300 students.
- Attended the 2023 Maker Faire in Cairo Representing the Robotics Club.

Corporatica

Natural Language Processing Intern

September 2024 - November 2024 (3 months)

Wyoming, USA

- Optimised RAG pipelines using LangChain, LangGraph, and LangSmith tracing with Pinecone vector database, improving retrieval efficiency and reducing response time by ~15%.
- Implemented a LangChain-based ReAct agent with prompt engineering and custom tools, reducing LLM hallucinations by 20%.

- Contributed to all stages of NLP pipelines—pre/post-processing, LLM integration, monitoring, and evaluation—handling structured and unstructured data for production deployment.

RoboCup Federation

AI & Robotics Engineer

December 2023 - August 2024 (9 months)

Alexandria, Egypt & Eindhoven, Netherlands

- Developed a computer vision pipeline using OpenCV and PyTorch for real-time object detection and person tracking at 30 FPS, enabling autonomous task execution during competition scenarios.
- Fine-tuned Hugging Face transformers for NLU/NLG, integrated on-device speech recognition using PyTorch and TensorFlow, achieving ~0.3s average response latency.
- Led software architecture decisions for the team's AI stack, coordinating vision, speech, and navigation subsystems into a unified autonomous pipeline.
- Achieved 1st place nationally (Egypt) and 3rd place internationally (Netherlands) in the RoboCup@Home Competition.

Mentorless

Machine Learning Intern

April 2024 - May 2024 (2 months)

Ahmedabad, Gujarat, India

- Built predictive models for disease diagnosis (Anemia, Diabetes, Thalassemia) and Indian stock market forecasting for multiple clients using Scikit-learn, TensorFlow, and PyTorch.
- Developed classifiers, including Naive Bayes, Random Forest, and Logistic Regression for disease prediction, and sequence models (LSTM, GRU) for stock forecasting.
- Compared multiple models and selected top performers (achieving more than 90% accuracy) for deployment, evaluated using accuracy, F1-score, ROC AUC, and RMSE.

Education

Arab Academy for Science, Technology and Maritime Transport

Bachelor's degree, Artificial Intelligence · (October 2021 - July 2025)

Al Ma'arifa International Private School

High School Diploma · (September 2017 - July 2021)
