

Mohamed Youssef Abdelnasser

AI Engineer

Dubai, UAE | [+971 50 342 9805](tel:+971503429805) | mohamed.y.abdelnasser@gmail.com

Portfolio: momad-xp.netlify.app | linkedin.com/in/mohamed-y-abdelnasser | github.com/Momad-Y

Nationality: Egyptian | UAE Resident, No Visa Sponsorship Required | Arabic (Native), English (Professional)

SUMMARY

AI Engineer with **2+ years** building agentic, LLM, RAG, and machine learning (ML) systems; shipped production **Generative AI (GenAI)** pipelines at Printerpix across **9 international markets**, with AI-written campaigns at **up to 5x** the revenue of human-written emails. AI-first developer (**Claude Code**, **Cursor**) in **Python**, **TypeScript**, and **SQL**; co-leading the Dubai AI team. B.Sc. Artificial Intelligence, **GPA 3.94/4.0**, Honours.

SKILLS

GenAI & LLM: Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), AI Agents, Prompt Engineering, Function Calling, LangChain, LangGraph, CrewAI, LlamaIndex, LangSmith, Pinecone, FAISS, Model Context Protocol (MCP) Servers, vLLM, Gemini, OpenAI API
ML & NLP: Machine Learning, Natural Language Processing (NLP), Computer Vision (OpenCV), PyTorch, TensorFlow, scikit-learn, Hugging Face
Data & Programming: Python, SQL, TypeScript, JavaScript, PostgreSQL, Redis, BigQuery, pandas, NumPy, Pydantic
Backend & Full-Stack: FastAPI, Flask, REST APIs, Webhooks, ETL Pipelines, React, Next.js, Supabase, Playwright, n8n
Cloud & DevOps: AWS, GCP, Azure, Azure OpenAI, Docker, Docker Compose, Kubernetes, Git, CI/CD (GitHub Actions, GitLab CI)
AI-First Development: Claude Code, Cursor, Antigravity, GitHub Copilot, Codex

WORK EXPERIENCE

Agentic AI Engineer

Printerpix UK Limited (Syncoms Group)

Dubai, UAE

October 2025 – Present

- Drove **up to 5x the revenue** of human-written campaigns in A/B tests by building a multi-tenant **agentic email marketing platform**: a LangGraph/LangChain **Python** pipeline orchestrating GPT, Claude, and Gemini, with a **Next.js** front end for human steering.
- Hardened the platform with a two-LLM generate-and-review (**LLM-as-judge**) copywriting loop, classifier-routed model selection cutting its model costs **25%** and hallucinations **15%**, **LangSmith** tracing, and prompt-injection guardrails.
- Cut the team's model API costs by an estimated **95%** by standing up an on-prem **LLM serving stack** (vLLM, LiteLLM) in production, running an open-weight Qwen-3.8-27B model with tiered model routing and per-user API keys.
- Co-lead the Dubai AI team of **4+ engineers**: run **3 weekly engineering syncs**, translate CEO and marketing-director goals into technical plans, and co-conduct **15+ AI Engineer** interviews across junior, mid, and senior levels (technical Q&A and live examinations).
- Built an **MCP server (30+ tools, resources, and prompts)** for a third-party affiliate platform, cutting manual analytics by about **80%**; shipped outreach and social pipelines (Grok, Gemini, 6 languages) that sent **25,000+ emails**, drove **500+ conversions**, and generated **1,000+** social posts.
- Developed an **ML pricing engine**: Elastic Net regression (scikit-learn) and **Monte Carlo simulation (10,000+ scenarios, 95% confidence)** across **900+ products** in multiple regions, plus competitor monitoring (Playwright + **Gemini** vision or Grok) over **82+ URLs**, with data flowing back through **BigQuery** (GCP) into the pricing models.

AI Engineer Intern

Corporatica

Remote (USA)

September 2024 – November 2024

- Optimised **RAG** pipelines using LangChain, LangGraph, and **LangSmith** tracing with a **Pinecone** vector database, tuning embeddings and semantic search to cut response time by roughly **15%**.
- Implemented a **ReAct agent** with custom **tool-calling** integrations (web search, database queries, API calls) using LangChain and prompt engineering, reducing hallucinations by **20%**.

AI & Robotics Engineer

RoboCup@Home – AAST Robotics Team

Egypt & Netherlands

December 2023 – August 2024

- Developed real-time **computer vision** and NLP systems with OpenCV, **PyTorch**, and Hugging Face Transformers on embedded hardware, reaching **30 FPS** object detection and about **0.3s** speech response latency.
- Led the team's AI software architecture to **1st place nationally** (Egypt) and **3rd place internationally** (Netherlands) at RoboCup@Home.

PROJECTS

BeMo – Personal AI Assistant (Graduation Project)

July 2024 – July 2025

- Engineered a **LangGraph** agent with **4 function-calling tools** (mail, tasks, smart home, retrieval) on a **Raspberry Pi** with local speech and emotion models at about **0.5s** latency; first-author research paper under review.

Lyric Logic – NLP Artist Classifier | Live: lyric-logic.streamlit.app

May 2024 – January 2025

- Built a text-classification pipeline (NLTK, **TensorFlow** LSTM/CNN) trained on **50k+ lyrics**, served as a Dockerised **FastAPI** REST API orchestrated with **Docker Compose** and backed by **PostgreSQL**.

EDUCATION

Arab Academy for Science, Technology, and Maritime Transport

B.Sc. in Artificial Intelligence (Intelligent Systems) – GPA: 3.94/4.0, Excellent with Honours

Alamein, Egypt

October 2021 – August 2025
